The U.S. forklift division located in Cleveland has a professional team experienced in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

In the beginning the domestic forklift marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. started in 1960, to import fully assembled lift trucks as part of a domestic machinery expansion project. Sales of these goods were primarily targeted to state-run firms, large scale organizations, and the armed forces. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced business operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical instruction became the new focus for improving quality and product development.

Domestic forklift business for Daewoo started in 1967 and grew to an astounding 90% market share in Korea. By the 1980's, Daewoo's advanced technological improvements combined with sales success placed them in a situation of substantial growth of their forklift operations.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a cooperative venture project to help them in the very competitive North American materials handling market. This project proved highly profitable for Daewoo and their forklift product sales expanded greatly. In 1984, the company completed construction of a new facility to help in manufacturing high end value-added products for export. In 1993, the corporation had a global sales system and started exporting models they had developed through in-house technology, as an sovereign product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into overseas marketplaces.
