

## Remanufactured Forklift Parts

Remanufactured Lift Truck Parts - Lift trucks are extremely pricey pieces of equipment. A five thousand pound new electric unit can cost between \$18,000 to \$25,000 and some thousands of dollars more will be needed for a battery and a battery charger. A similar internal combustion forklift of the same lift capacity would cost slightly less and the diesel models which are capable of heavier lifting capacities can cost upwards of \$100,000. Reconditioned lift trucks are an option in order to save much money as they cost less than half the price of new models.

Various individuals think they will face more repairs issues if they buy a reconditioned lift truck and are leery of buying a used forklift at a sale price. A properly reconditioned forklift would work just as well as a new one and whichever doubts of maintenance are unfounded. Though your lift would get heavy use, so long as you take good care of the machinery, it will serve all your needs and possibly save you lots of money.

It is essential to establish what the seller means by a reconditioned or refurbished lift truck when thinking about buying a used forklift. Many companies do a very good job reconditioning a model previous to selling it. This comprises disassembling the lift truck, rebuilding the engine, sandblasting the lift and after that reassembling the whole thing and finishing with a fresh coat of paint.

To correctly and meticulously rebuild a forklift engine, a good company would entirely disassemble it. A heat cleaning system could then be used to clean all the components. When this step has been finished, all of the components are checked to see if they have any extensive wear, any defects or breakage. Specific parts like for instance crankshafts, cylinder blocks, connecting rods and cylinder heads are resized, reground and resurfaced if needed. Other components such as gears, nuts, bolts and that. are replaced or repaired as considered necessary.

The engine is rebuilt by hand once the overhaul has been finished. After putting it back together, a series of tests are applied to the working machine. This is done to check all of the parts to guarantee there are no problems or leaks. If any problems occur, the necessary modifications are made.

There is no reason to be concerned about obtaining reconditioned forklifts from quality sellers. The process the machines go through to be rebuilt ensures the utmost reliability. Upkeep expenses could really work out to be less as you will avoid the initial phase of higher maintenance projections which a new lift truck has as it is broken in. By following routine maintenance schedules and taking care of the equipment appropriately, a reconditioned forklift will serve you well.
